

CYBERDISE Security Awareness Portfolio

Transform Employees into Vigilant Defenders with Didactically Designed Cybersecurity Training and Testing

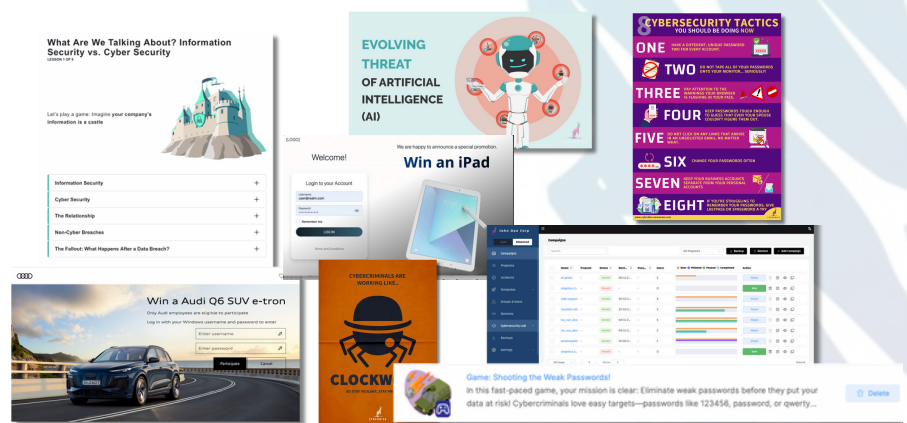

Key benefits

Reduce Employee-Driven Vulnerabilities

- Use **phishing simulations** to test your staff, uncover vulnerabilities, and fix them before they turn into threats.
- Run **smishing simulations** to prepare employees for mobile-based attacks and reduce risk on personal devices.
- Deliver immediate **customized training** right after risky behavior to change habits before incidents take place.
- Gauge understanding with interactive **assessments and quizzes**
- Promote positive behavioral changes with **didactically and pedagogically sound training modules**, ensuring effective knowledge transfer and retention
- Adapt subject areas and **difficulty levels** to meet the unique needs of different teams and employees
- **Clone any website** for highly realistic phishing simulations using our Website Cloner

CYBERDISE Security Awareness Training delivers effective education through a simple, engaging approach based on proven learning principles. Our **5-10 minute modules** follow an intuitive **three-part structure**: concise theory to explain key concepts, interactive games to reinforce them, and a quick quiz to confirm understanding. **Each module** is built for real-world relevance and practical application - helping organizations **tailor programs** to their specific policies, risks, and employee needs.

By emphasizing the **“why”** behind **security policies**, we turn employees into a proactive line of defense. Our awareness materials keep cybersecurity top of mind, reinforcing training with a **human-centric touch**.

CYBERDISE Security Awareness Training includes a wide range of training content and security awareness materials. Explore freemium version of CYBERDISE Security Awareness and access additional resources at

Cybersecurity Learning
Management System

“The modern solution meets all our needs. It is an essential component of our cyber protection, it contributes significantly to raising awareness, and reduces risks. We can highly recommend CYBERDISE.”

Ismael Aemisegger, IT Support Team Leader at GLB

“As a system engineer, I was able to launch my first phishing campaign within 30 minutes, including installation. I set up the system, added domains, generated SSL certificates, created the phishing simulation based on a template, added users, and I was ready to go. What I particularly liked are the Campaign Checks!”

Norman Umbach, Senior Consultant at DSS-CONNECT

Editable Training modules

Our award-winning training modules are built on a didactically and pedagogically sound framework, designed to drive meaningful behavioral change and ensure effective knowledge retention. Available in gaming, interactive, and video formats, they cater to diverse learning preferences, keeping employees engaged and informed. And the best of it: you can adopt every training module to your needs because they are editable!

- The lessons are bite-sized and focused. Modules take just 5-10 minutes to complete, delivering impactful training without disrupting workflows.
- The training is optimized for mobile devices, employees can train anytime, anywhere, on any connected device.
- Content is available in over 12 languages. Professionally translated and localized, it ensures maximum relevance for global teams. You can request any language addition.
- Training is fully customizable. Use our solution and adapt everything - text, screens, images, and questions - to align with your organization's needs.
- Training can be exported and reused elsewhere using the SCORM standard.

Available training modules
